

Consortium on Naval Enterprise Pathways

Research and Development of Maritime Power Short Course 2025

The Research and Development of Maritime Power Short Course is a week-long, residential course designed for students to explore the unique challenges to the maritime environment and for the Navy. By the end of the course, attendees will understand Navy Science and Technology (S&T) and Research and Development (R&D), the role Congress plays in S&T and R&D investments, as well as the importance of oceans to national security. They will learn how researchers drive capability discussions and how researchers communicate with decision makers.

The RDMP Short Course is open to undergrads. There is no course fee. Dorm accommodations and most meals will be provided. Space is limited - apply early.
